

Singapore to get a new Skin Centre

21 April 2018 | News

The laboratories will facilitate studies on skin issues prevalent in Singapore.

A new National Skin Centre (NSC) scheduled to open in 2022 will house enhanced facilities and have its capacity boosted by 50 per cent, in order to meet the rising demand for dermatological services among Singaporeans.

The new 10-storey building, which will be located at the NSC's current Novena site, will have 69 consultation rooms, up from the current 46.

The laboratories will facilitate studies on skin issues prevalent in Singapore and support the conduct of a wider range of clinical trials for new therapies for common skin conditions.

A Skin Physiology Clinic will support research on the development of new skin diagnostic techniques and conduct trials for new non-invasive skin diagnostic techniques.
