

NuVasive launches next-gen spinal fusion system

16 July 2018 | News

NuVasive announces the commercial launch of its next-evolution Reline system called Reline MAS Midline, used in spinal fusion procedures.

Singapore – NuVasive announces the commercial launch of its next-evolution Reline system called Reline MAS Midline, used in spinal fusion procedures. The company says it incorporates extremely low-profile modular implants and advanced system instrumentation to address alignment and potentially reduce adjacent transition syndrome, a complication from the procedure characterized by disc degeneration at the adjacent segment to the fused vertebrae.
