

Pfizer's Herceptin biosimilar approved in Europe

31 July 2018 | News

Trazimera is the third biosimilar version of Roche's Herceptin in Europe.

Singapore – The European Commission approves Pfizer's TRAZIMERA, a biosimilar of Roche's cancer med Herceptin (trastuzumab).

TRAZIMERA, a potential biosimilar to Herceptin (trastuzumab), targets the treatment of HER2 overexpressing breast cancer and HER2 overexpressing metastatic gastric or gastroesophageal junction adenocarcinoma.

The advisory group CHMP adopted a positive opinion backing approval in May.
