

Roche Diagnostics Korea unveils new pathology device

01 August 2018 | News

The device is a next-generation digital pathology scanner that connects to Roche Diagnostics' iScan Coreo and VENTANA iScan HT.

Roche Diagnostics Korea has launched its high-speed slide scanner for digital pathology, called the VENTANA DP 200, in the domestic market with approval from the Ministry of Food and Drug Safety.

The device is a next-generation digital pathology scanner that connects to Roche Diagnostics' iScan Coreo and VENTANA iScan HT.

The DP 200 is a tray-type design that does not require slides to be moved directly, reducing scan errors and adding stability to equipment operation.

The device also applies a unique International Color Consortium (ICC) color profile to each image to ensure the digital image closely matches colors observed under a microscope. It's Area of Interest (AOI) automatic detection function produces high-quality images.
