Philips introduces new cardiovascular ultrasound system

August 23, 2018 | News

Built on the powerful EPIQ ultrasound platform, EPIQ CVx is specifically designed to increase diagnostic confidence and simplify workflow for clinicians.

Royal Philips, a global leader in health technology, has introduced the EPIQ CVx cardiovascular ultrasound system. Built on the powerful EPIQ ultrasound platform, EPIQ CVx is specifically designed to increase diagnostic confidence and simplify workflow for clinicians, giving them more time to interact with their patients and reducing the need for repeat scans.

The initial response to the new system has been overwhelmingly positive- 95% of a group of clinicians who were shown the new EPIQ CVx believed it offered improved image quality: sharper and clearer images. Philips is also introducing the EPIQ CVxi, specifically tailored for use in the interventional lab. EPIQ CVx and EPIQ CVxi are CE marked and have received 510(k) clearance from the U.S. Food and Drug Administration (FDA).

The EPIQ CVx includes a cardiology-specific user interface which simplifies the exam experience through a user-configurable touch-screen interface, allowing clinicians to personalize their controls and improve workflow for their cardiology exams. Philips also reaffirms its dedication to privacy and security by providing strong security capabilities and protocols.
