SigTuple Tech receives recognition at Demo Day Asia

September 24, 2018 | News

After this win, the startup will have an opportunity to be mentored by Google executives on product development.

Bengaluru, India based SigTuple Technologies was given the Judges' Choic' award at the Google's first Demo Day Asia programme held in Shanghai recently. Out of hundreds of applications from entrepreneurs across Asia-Pacific, 10 outstanding founders were chosen as finalists.

After this win, the startup will have an opportunity to be mentored by Google executives on product development and will get access to the Google for Entrepreneurs global partner network.

SigTuple creates Artifical Intelligence (AI)-based solutions to automate healthcare screening. It has built intelligent screening solutions to aid diagnosis through AI-powered analysis of visual medical data.

The start-up also has an AI platform called Manthana, which helps analyse visual medical data efficiently. Manthana has enabled the company to work on five high-volume screening processes - analysis of peripheral blood smears, urine microscopy, semen, fundus and OCT (optical coherence tomography) scans and chest X-rays.
