

Ascleitis, Roche expand partnership in viral Hepatitis

26 November 2018 | News

Roche will grant Ascleitis an exclusive sales & marketing promotion right in Mainland China for Pegasys, a leading pegylated interferon treatment for Hepatitis B and C.

Shanghai Roche Pharmaceuticals Ltd. and Ascleitis BioScience Co., Ltd. have jointly announced that starting from 1st Dec 2018, Ascleitis and Roche will expand their partnership in viral Hepatitis. Following the first successful partnership and promising launch for Ganovo (Danoprevir), Ascleitis and Roche have decided to embark on a Pegasys partnership. Roche will grant Ascleitis an exclusive sales & marketing promotion right in Mainland China for Pegasys, a leading pegylated interferon treatment for Hepatitis B and C.

"We are pleased to enter this strategic collaboration with Ascleitis, a trusted partner with strong commitment to the area of viral Hepatitis, a major health concern in China. With this new model of business, we will further enhance the clinical usage of Pegasys in Hepatitis treatment in order to benefit more patients. Hepatitis B continues to be a core area of research and development at Roche. Roche has a long-term commitment to China and our investment in China continues to grow," said Hong Chow, General Manager, Roche Pharma China.

Jinzi J. Wu, PhD, Founder, Chairman and CEO at Ascleitis added, "Roche has been an outstanding partner who has always put patients' needs first. Both Ascleitis and Roche are committed to developing innovative Hepatitis B medicine. Ascleitis has demonstrated strong development capability and solid commercial presence in China in the area of Hepatitis. The structure of this transformative collaboration will better serve China Hepatitis patients and create significant value for our shareholders. This marks a major step forward for Ascleitis to address unmet needs of both Hepatitis B and C patients in China, which is in line with our strategy as a fully integrated China biotech leader focused on liver diseases."
