

Pall opens Biotech integrated solutions Centre in China

19 December 2018 | News

Pall Biotech has invested heavily in a growing network of CoE facilities worldwide to support its global biopharmaceutical customer base.

Pall Corporation, the global leader of advanced filtration, separation and purification technologies, has established a Biotech Integrated Solutions Center of Excellence (CoE) in Shanghai, China.

Strategically located in the heart of Shanghai's renowned life science cluster, the CoE is a new state-of-the-art facility for bioprocess engineering consultancy, technology demonstration, testing and training for China and broader Asia. An opening ceremony was held on 18th December.

Equipped with advanced bioprocessing equipment and automation platforms, the CoE showcases the latest end-to-end technological solutions for biomanufacturing, including single-use cell culture solutions, cell clarification using acoustic wave technology, chromatography using automated packing techniques, viral clearance, tangential flow filtration and mixer / container modules.

It is designed to lead Pall's customers through the sequential stages of process flow and will serve as a proving ground for new technologies, as well as a training facility for Pall customers and Pall employees.

Pall Biotech has invested heavily in a growing network of CoE facilities worldwide to support its global biopharmaceutical customer base. Three CoE facilities currently exist in Portsmouth (UK), Westborough (USA), and Shanghai (China), with planning for a new European facility in process.
