

Venus Concept brings Venus Heal to heal soft tissue injuries

06 February 2019 | News | By Sonali Wankhade

Venus Heal™ is powered by RP3 technology, which synergistically combines the benefits of Multi-Polar Radio Frequency (RF), Pulsed Electro Magnetic Fields (PEMF), and massage

Venus Concept Ltd., an innovative global medical technology leader, announces the launch of its latest medical device, Venus Heal™. With over 11,000 systems installed worldwide, Venus Concept has expanded their suite of leading medical devices and incorporated their most advanced technology into this latest innovation, intended for the accelerated healing of soft tissue injuries and conditions.

Venus Heal™ is powered by RP3 technology, which synergistically combines the benefits of Multi-Polar Radio Frequency (RF), Pulsed Electro Magnetic Fields (PEMF), and massage. In addition to its compact and portable design meant to adapt to a specialist's needs in-clinic or on-site, Venus Heal™ also includes advanced technological features for superior patient comfort and consistent treatment efficacy.

"Whether patients are athletes with acute injuries or workers with repetitive strain injury, Venus Heal™ offers the newest

modality and the best solution to relieve pain, increase local blood circulation and increase range of motion through relief of muscle spasm. Combined with Venus Concept's unique business model, our customers realize a higher ROI with low-risk ownership. It's the perfect solution for all rehabilitation professionals", Domenic Serafino, Chairman and Chief Executive Officer said at Venus Concept.
