Single-Use Modules Expedite Total Solutions

As the biopharmaceutical industry continues to grow at a rapid pace, companies are realizing that they may need to transform their biomanufacturing networks to respond to changing market dynamics and anticipate customer requirements. A major factor behind the growth of the biopharmaceutical industry has been the huge and continued success of the monoclonal antibodies segment. Within the industry, however, companies have started to diversify their pipelines, developing products such as antibody-drug conjugates, non-antibody recombinant proteins, gene therapies, and autologous and allogenic cell therapies.
