CST and Cell Press launch Cell Mentor in China

October 22, 2019 | News

Online Resource to Help Scientist Achieve Experimental and Career Success Now Available

US headquartered Cell Signaling Technology (CST), a leading provider of antibodies, kits, and services, and Cell Press, a leading publisher of over 40 primary research and review journals, have announced that Cell Mentor™, an educational resource for biology students and researchers is available in China.

Originally launched at AACR on March 30th, Cell Mentor enables biology students and researchers to easily navigate their careers, get published, and strengthen their laboratory skills to reach experimental success. Scientists in China will now have the ability to utilize Cell Mentor in their native Mandarin language at www.cellmentor.cn.

Cell Mentor is full of educational content from both Cell Press and CST and information is presented according to the types of challenges students and researchers face during their careers. It is designed to address real-life quandaries faced by students and researchers in and out of the lab.

To celebrate the new Cell Mentor section, CST hosted IUIS 2019 Featured Forum: New Frontiers in Immunology, New Beginnings with Cell Mentor on October 21st. In the forum, renowned opinion leaders in immunology introduced the new frontiers in infection and immunity, NK cell-based immunotherapy of cancer, stem cell research and applications.

In addition, Jay Dong, Vice President and General Manager China and Asia Pacific at CST introduced the origin of Cell Mentor and how it can facilitate scientific experiments, and Peter Lee, Editor-In-Chief of Immunity and Publishing Director at Cell Press, discussed how to publish papers in *Cell*, *Immunity* and beyond.
