

China to set up joint lab for COVID-19 treatment

13 April 2020 | News

To help Pulmonary Rehabilitation Follow-up Care and to develop epidemics prediction and alert system

Huami has announced a collaboration with China National Clinical Research Center of Respiratory Disease (NCRCD) and Guangdong Nanshan Medical Innovation Institute, led by Dr. Nanshan Zhong, to establish a smart wearable joint laboratory.

Based on Huami smart wearable technology and powerful computing algorithms, the lab aims to help COVID-19 recovered patients' follow-up care and management through the NCRCD big data platform. Moreover, the lab would jointly contribute to an epidemic prediction and alert system.

Dr. Nanshan Zhong, aged 83, an international famed respiratory disease specialist and academician of Chinese Academy of Engineering, was a pioneer in the SARS control in 2013 and is now the leader of the senior experts of COVID-19 prevention with China's National Health Commission. Dr. Nanshan Zhong has been fighting at the frontline of the coronavirus outbreak since reporting the person-to-person transmission of COVID-19 in January.

Since the coronavirus outbreak, Huami has continued the efforts of "Connect Health with Technology". The company has donated medical supplies and devices worth 11.5million RMB since the COVID-19 epidemic outbreak. Huami has also developed a smartwatch for medical staff in Wuhan, with a feature to ease psychological distress.
