

Stryker unveils industry's first completely wireless hospital bed

20 October 2020 | News

It is the only bed on the market today that can connect seamlessly to nurse call systems without the use of cables or wires

Stryker, one of the world's leading medical technology companies based in the US, has announced the global launch of the industry's first and only completely wireless hospital bed, ProCuity™.

This intelligent bed was designed to help reduce in-hospital patient falls at all acuity levels, improve nurse workflow efficiencies and safety, as well as help lower hospital costs. It is the only bed on the market today that can connect seamlessly to nurse call systems without the use of cables or wires.?

Set at an industry low height of 11.5 inches, ProCuity is ergonomically designed with the latest technologies to promote safe patient handling and help reduce fall-related injuries, including intuitive patient positioning and bed alarms as well as ergonomic side rails.

Helping to address nurse call cable connectivity issues prevalent in hospitals today, ProCuity can be equipped with fully wireless features. Additionally, the bed's easy-to-use touchscreens and other key components makes the job of caregivers easier and more efficient, while providing for a more enhanced patient experience.?
