Malaysia launches smart microchip anti-virus air sanitizing purifier

January 11, 2021 | News

It emits a fine mist of Ionic Nano Copper (INC16K) disinfectant throughout the space to deactivate all airborne viruses instantaneously

Malysian firm Eco Awareness Asia launches EcondLife, the world's first smart microchip anti-virus air sanitizing purifier to safeguard people from viruses, including coronavirus.

EcondLife is suitable for all premises including homes, corporate offices, waiting areas, meeting rooms, restaurants, school & educational centres, clinics & hospitals, fitness centres, hotels, shopping complexes, commercial or public areas.

EcondLife is a microchip programmed ultrasonic humidifier. It emits a fine mist of Ionic Nano Copper (INC16K) disinfectant throughout the space to deactivate all airborne viruses instantaneously.

The INC16K nano-particles also form protective layers on all hard and soft surfaces in the room that would inhibit any viruses coming into contact.

INC16K is certified by NSF, ANSI & EPA to be human-friendly. It is 100% Food Grade Organic Minerals and proven effective in inhibiting human coronavirus up to 99.99%.

EcondLife is endorsed by the Malaysian Medical Association KOOP. It's certified internationally by TUV, CB, CE, and locally by Suruhanjaya Tenaga, SIRIM, and Safety Authority Singapore.

Since its soft-launching in June, EcondLife is well accepted by many establishments including Klinik Alam Medic in Klang. The owner, Dr. Sangeeta Kaur related her clinic has many clients including insurance, government-linked companies, and corporations.
