Malaysia extends Bactiguard wound care purchase tender

August 26, 2021 | News

Extention enables primary and secondary care healthcare providers to purchase Bactiguard's Wound Care system for infection prevention

Bactiguard's tender award for wound care products for the public sector in Malaysia has been extended by another year and the volume has increased. This enables healthcare providers in both primary and secondary care to purchase Bactiguard's Wound Care system for infection prevention.

"The public sector in Malaysia has consumed almost half a million bottles of our wound care products during the past five years with a very positive outcome. Therefore, the Ministry of Health has extended the contract by another year with and increased the volume by 20 precent, which clearly shows that it adds value for patients and clinicians," says Peter Rådqvist, Global Head of Sales at Bactiguard.

"At the University Medical Center (UKM) in Kuala Lumpur, we have used the solution for intra operative irrigation of open fractures and as a disinfectant for infected wounds and joints, as well as part of our general wound management practice," states Dr Badrul Akmal Hisham, Consultant Orthopedic and Arthroscopy & Sports Surgeon at UKM Medical Center, Kuala Lumpur.

Bactiguard's Wound Care solution is highly recommended as the ultimate antiseptic in Malaysia, as it is non-toxic to human cells and at the same time very effective as a bactericidal, virucidal, fungicidal and sporicidal.
