Malaysia-based Vista introduces cutting-edge swiss technology for cataract surgery

April 6, 2022 | News

Giving patients a simple, fast and safe procedure

Vista, one of the leading eye specialist player with 11 centres across Malaysia, has introduced an all-swiss technology that raises the potential for a great cataract surgery.

The Swiss made Sophi Wireless Phacoemulsification (Phaco) System by This AG allows surgeons to have better control of their surgery. Designed to be mobile - with no cables allowing maximum flexibility and mobility, and simple - by taking the complicated controls and handling away from the surgeon, Sophi's goal is to help the surgeon focus on the intrinsic surgery.

"Another major Sophi benefit is its enhanced safety features that reduces the risk of contamination and increases surgical stability, resulting in a safe and fast surgery," shares Dr. Aloysius Joseph Low, Chief Ophthalmic Surgeon in Vista. "Vista's objective is to raise the bar in the evolution of cataract surgery and migrate away from manual procedures, towards computer assisted technologies, artificial intelligence and the latest generation of Trifocal Lenses that aim to help increase patient's safety, comfort and results."
