BioEnable launch biometric kiosks

April 24, 2012 | News | By BioSpectrum Bureau

Bangalore:Ã?Â BioEnable Technologies announced the launch of their new generation Biometric Kiosks. The device type is used for a number of different applications including food coupons, self service kiosks, tickets, canteen kiosks, member verification, check deposit, retail and banking to name a few.

The device comes with a range of new features including increased memory and large computer CPU, which combines to offer sufficient processing capabilities to support high and Biometric verification or identification system. The work force cost is reduced and interaction made easy because of the multilingual touch screen interface. The device is easy to repair and maintain as well. Mr Pradeep Bhatia, managing director of BioEnable technologies added, "This new biometric Kiosk is a self-contained front-end platform, which easily installs in office space to perform the simultaneous capture of the Face image and Fingerprints."

The updated kiosks are also seen as a perfect mean to improve the banking services and make the process more convenient for the customers. "These new kiosks will make Banking services much easier than ever before," Pradeep Bhatia said. "We are here to make the process of Banking services the old ones as speedy and painless as we can."
