UCrest partners with Malaysian Genomics to digitalise genome services worldwide

July 20, 2022 | News

The Asia Pacific genome sequencing market will grow by 15.6% annually over 2022-2030

UCrest Berhad and Malaysian Genomics Resources Centre have signed a collaborative agreement to integrate genomic testing services into digital health platform, iMedic(TM), elevating healthcare services to the next level.

Under this agreement, a virtual genome service centre will be developed on iMedic platform enabling the genomic testing services of MGRC to be made available to the hospitals and clinics (B2B), widening its market access not just in Malaysia, but globally.

Additionally, the genomic testing services will also be made available to patients directly (B2C). Patients' genomic data from their test results will be integrated into Electronic Medical Records (EMR) making it accessible by doctors and patients in the process of consultation and management, resulting in improved accuracy in diagnosis and treatment.

"This partnership with Malaysian Genomics allows us to enhance our vision of integrating preventive and precision medicine into iMedic where genome data will empower the patients to better prevent and manage the chronic diseases with the online consultation of doctors," said Eg Kah Yee, Chief Executive Officer of UCrest. "Cancer, Cardiovascular Diseases (CVD), diabetic, asthma, sleep apnea and many other chronic diseases can be prevented, managed or treated more effectively with the addition of the genome services," he added.
