

## Eppendorf launches new Biobased Tubes

19 August 2022 | News

**The tubes will be shown for the first time at ACHEMA in Germany from 22 - 26 August 2022**

The new generation of tubes "Eppendorf Tubes® BioBased" is made from 90 % "bio-circular", renewable-based feedstock (recycled e.g. from food oil wastes and residues) plus 10 % fossil-based feedstock.

Thus, these tubes in the sizes 5.0 mL, 15 mL, 25 mL and 50 mL with screw cap are made of certified polypropylene based on renewable, recycled raw materials and are called "BioBased".

This means that Eppendorf is no longer focusing only on the development of new products, but also on new manufacturing materials. In line with the "Reduce, Reuse, Recycle" concept, the main goal is to produce polymer products in a much more sustainable way without compromising the guaranteed product quality and performance needed in increasingly demanding research.

The Consumable production centre in Oldenburg/Germany meets the requirements of the ISCC PLUS (International Sustainability & Carbon Certification) certification system. Additionally, sustainability of the tubes is certified by "My Green Lab®" with "ACT Certificates" (Accountability, Consistency, Transparency).
