New office in Tokyo brings smarter dentistry solutions to Japan

DentalMonitoring, the leading global provider of smart dentistry solutions, is setting foot in Japan to serve the Asian market with its artificial intelligence (AI)-powered remote monitoring solution and latest clinical data analysis platform DM Insights.

Having been granted market authorization, the company headquartered in Paris, France, is now bringing its suite of intelligent solutions onto the Japanese market. From lead engagement and conversion to remote monitoring of all treatment modalities, DentalMonitoring has helped transform over 7,000 practices worldwide and over 1 million patients have already been using its ScanBox??? and 4.9 rated app, helping optimize their treatment experience. ScanBox??? will be available from Dental Monitoring Japan in October 2022.

By leveraging the power of data, DentalMonitoring helps improve quality of care, enables practices optimization and growth and enhances patient experience. To support the market, DentalMonitoring has set up a new direct sales team to help on-board and grow customers. The team will be led by Hiroyuki Nishiya, General Manager, who was formerly 3Shape Japan.
