Eppendorf announces release of new-gen epMotion automated liquid handler

February 27, 2023 | News

The new epMotion is the first Eppendorf instrument to feature Eppendorf's new product design

Eppendorf has announce the release of the new generation of the epMotion automated liquid handler at the SLAS conference in San Diego, CA, USA on February 26, 2023.

The new generation of epMotion boasts a range of enhancements aimed at improving user experience, without compromising its trusted performance. The device will maintain its high degree of flexibility, wide range of accessories options, and large selection of available methods.

The epMotion offers unparalleled precision and accuracy in liquid handling, with a user-friendly interface and customisable protocols. The new design includes a sleek, compact form and improved ergonomics for comfortable and efficient use.

Dr Josef Lott, Product Manager Automation at Eppendorf said, "We have developed a liquid handler that makes implementation of automation in laboratory workflows easier than ever before, and we are confident that the new epMotion will become an invaluable tool in your laboratory."

The new epMotion is the first Eppendorf instrument to feature Eppendorf's new product design. This design will define the appearance of future Eppendorf products.

The new generation of epMotion will be available for purchase after the SLAS conference and will be on display at the event, till March 1st.
