

AHI and Changlin announce partnership for transformative leap into future of healthcare in China

03 August 2023 | News

The license agreement includes an upfront payment of \$10 million to AHI

Australian firm Advanced Health Intelligence (AHI) has executed a binding exclusive, perpetual license with Shanghai-based startup Changlin Network Technology. The intention is to provide individuals with AHI's Biometric Health Assessment via the Changlin platform or application, identifying commonly known chronic disease indicators to triage the individual into the appropriate care pathways.

Chronic diseases have become a prominent public health concern in China, with increasing prevalence due to changing lifestyles and an aging population. Conditions such as diabetes, hypertension, and cardiovascular diseases significantly burden the healthcare system, primarily due to late-stage identification leading to episodic, event-driven care that can be both costly and less effective.

Changlin believes the adoption of the AHI technology will drive proactive health management strategies, using the predictive analytics capabilities of the AHI biometric health assessment and personalising care on an individualised basis. This innovation will help China shift from an event-driven healthcare paradigm to a preventive one. This shift will enable patients to receive timely care, resulting in better health outcomes and more efficient utilisation of healthcare resources.

AHI expects the initial commercial benefit to be the \$10 million license fee payment. Further commercial benefit will only be realised once commercialisation commences, and AHI receives the outlined revenue share. Additional commercial benefits will be the annual \$5 million license fee.
