

STARLIMS acquires Labstep to expand portfolio across R&D through product commercialisation

22 August 2023 | News

Labstep's Electronic Laboratory Notebook will deliver deeper R&D capabilities to support customers in ideation phase of product development

US headquartered STARLIMS, a leading provider of enterprise informatics solutions, has announced the expansion of its solution suite through the strategic acquisition of Labstep, a cutting-edge, R&D Electronic Laboratory Notebook (ELN) based in London.

This acquisition brings both companies to the forefront of modern informatics and addresses the critical challenges customers face in finding an advanced platform that supports them from R&D through to market surveillance.

By combining STARLIMS' comprehensive Laboratory Information Management System (LIMS) technology with Labstep's user-friendly, SaaS ELN platform, users can remove complexity from the lab and unlock data's true potential in a progressive, connected system.

The acquisition of Labstep represents a significant milestone for STARLIMS, as it introduces a modern and user-friendly ELN to its existing platform. The integration accelerates ideation and planning through its easy-to-use documentation functionality, automation capabilities, and seamless connectivity to instruments and systems, moving users away from cumbersome paper-based record keeping. This unified solution liberates scientists from manual documentation, leaving them with more time to conduct research.
