Swedish firm Getinge strengthens commitment to Indian healthcare with launch of Servo-c Ventilator

February 16, 2024 | News

Servo-c boasts essential functionalities for safe, easy, and efficient use, enabling personalised respiratory treatments

Getinge, a global leader in medical technology, has announced the launch of its cutting-edge Servo-c mechanical ventilator to the Indian market. The Servo-c is designed to address the diverse respiratory needs of both pediatric and adult patients, offering lung-protective therapeutic tools.

This launch is a significant step towards making advanced healthcare solutions accessible and affordable for hospitals across India.

With the rising costs of healthcare, there is an increased focus on investing in safe, high-quality, and sustainable solutions. Sweden-based Getinge's Servo-c, drawing from over 50 years of Servo performance, aims to simplify respiratory support, ensuring hospitals in India have access to state-of-the-art equipment at an affordable price point.

Aruna Nayak, Managing Director at Getinge India, commented on the launch, "We beleve the Servo-c will play a pivotal role in enhancing respiratory care in India, offering personalised treatments and streamlining workflows in intensive care units."

Servo-c boasts essential functionalities for safe, easy, and efficient use, enabling personalised respiratory treatments. The modular component parts facilitate smart fleet management, ensuring uptime and cost efficiency without the need for proprietary disposables. Features such as CO2 monitoring and Servo Compass contribute to visualising volume and pressure targets, providing real-time and retrospective insights into lung mechanics and gas exchange.
