

BD increases access to cutting-edge image-enabled, spectral cell sorters

05 April 2024 | News

New BD FACSDiscover™ S8 cell sorters to enable more researchers to push the boundaries of discovery

American firm BD (Becton, Dickinson and Company), a leading global medical technology company, has announced the global commercial release of new cell sorters that will enable more researchers in a broader range of fields, including cell biology, cancer research and immunology, to reveal insights that were previously invisible in traditional flow cytometry experiments.

The new BD FACSDiscover™ S8 Cell Sorters feature BD CellView™ Image Technology, and BD SpectralIFX™ Technology, bringing to market breakthrough innovations in real-time imaging and spectral flow cytometry.

The three- and four-laser additions to the BD FACSDiscover™ S8 Cell Sorter family complement the five-laser instrument launched last year and provide scientists greater access, options, and flexibility to incorporate real-time imaging and spectral cell sorting technology in their labs.

Using the FACSDiscover™ S8 Cell Sorters, researchers can confirm complex biological and spatial insights in real time, obtain individual cell images and isolate desired cells based on visual characteristics at high speeds, all within a simplified and easy to use workflow. BD CellView™ Image Technology improves sort and sample quality, bringing confidence to biological results and saving researchers time and cost in their downstream applications. This expedited time to insight expands capabilities for researchers to transform research and cell-based therapeutic development across numerous fields in drug discovery, immuno-oncology and genomics.
