Japan's Nipro Corp invests $398 M into new medical device manufacturing facility in US

July 18, 2024 | News

Set to generate 232 new jobs and involve an investment of approximately $398 million over the next five years

Nipro Medical Corporation, a subsidiary of Japan headquartered Nipro Corporation, has announced its significant expansion in the United States (US) with the establishment of its first North American manufacturing facility in Greenville, North Carolina. This strategic development is set to generate 232 new jobs and involve an investment of approximately $398 million over the next five years.

By establishing manufacturing in the United States, Nipro will significantly reduce global transportation needs, cutting down on carbon emissions. This initiative underscores Nipro's dedication to minimizing environmental impact and fostering a sustainable future.

The new facility in Pitt County marks Nipro's first venture into producing advanced medical devices directly in the US market. The advanced manufacturing site will host a range of positions from engineering and production to administrative and management roles.
