Indian startup Qure.ai joins hands with Roche to transform healthcare capabilities in APAC

October 29, 2024 | News

The collaboration aims to expand access to AI across Asia-Pacific, enhancing diagnostic detection and improving patient outcomes

Qure.ai, a leading artificial intelligence (AI)-powered healthcare solutions provider in India, has announced a strategic collaboration with Roche Diagnostics Asia Pacific under the Startup Creasphere APAC – Batch Four initiative.

Startup Creasphere, now in its fifth year, is one of the largest hubs for digital health innovation worldwide. The initiative will leverage Qure's proven AI solutions for medical imaging further into the Asia Pacific (APAC) region with the goal of transforming healthcare together.

Qure and Roche will work together to combine their expertise to validate and implement innovative AI-driven imaging technologies. The central focus is advancing healthcare by leveraging Qure's deep-learning imaging tools complemented by Roche's diagnostic portfolio. The collaboration is part of Roche's broader efforts to foster the healthcare innovation ecosystem and empower companies like Qure to innovate the healthcare sector with data-driven technology.

Cardiovascular conditions and lung diseases remain key challenges in the Asia-Pacific region. The collaboration under Startup Creasphere aims to directly address these issues with AI-powered earlier identification, clinical confidence, and management. Qure's solutions for X-ray and CT can assist clinicians by detecting early signs of diseases such as heart failure and lung cancer, facilitating timely interventions. As part of this collaboration, a pilot project will further explore the integration of these solutions into various healthcare settings, validating the effectiveness of AI in assisting radiologists plus wider healthcare professionals in prioritising urgent cases.
