Core8 Group and MedArmor to pioneer Vietnam's first AI x ESG hospital

December 13, 2024 | News

A milestone in preventive healthcare and technological innovation in Long An

Core8 Group, an Australian leader in high-tech and biotech innovation, has unveiled plans to develop Vietnam's first AI x ESG Hospital, marking a significant milestone in healthcare transformation.

A cutting-edge healthcare model that combines AI-driven innovation with the latest Environmental, Social, and Governance (ESG) principles, this visionary project will anchor VIEH Singapore's hub in Long An, positioning the region as a nexus for healthcare and technological advancements.

The Core8 MedArmor AI x ESG hospital levers advanced artificial intelligence (AI) to collect and analyse patient health data, delivering actionable insights for preventive screenings and personalized medical guidance.

Core8's innovative approach aims to establish a cost-efficient, preventive healthcare model that promotes societal well-being. Core8 aims to support the transformation of healthcare in Vietnam by shifting the focus from treating illness to preventing it.

Core8's MedArmor AI x ESG Hospital will introduce a proactive healthcare model that emphasizes early detection and timely interventions, promoting better health outcomes for individuals and communities.

- **Proactive Healthcare for Better Health Outcomes:** By focusing on prevention and early action, the hospital will minimize the burden of advanced illnesses and improve the overall quality of care.
- **Enhancing Health Monitoring:** Improved systems for regular health checks and monitoring will empower patients and healthcare providers to take timely, informed decisions about care.

Core8 invites experienced global players in healthcare, AI, and ESG to join an established network of local and international innovators already working on this transformative project.
