PolyU signs MoU with Southern Medical University to advance medical development in Hong Kong

December 17, 2024 | News

To further promote the transformation and application of medical research and technological achievements

The Hong Kong Polytechnic University (PolyU) and Southern Medical University (SMU) have signed a Memorandum of Understanding (MoU), joining forces on advancing medical development through innovative research and nurturing medical talent, contributing to the global medical industry, human health and well-being.

PolyU and SMU will leverage their respective strengths to explore innovative research in cutting-edge medical technologies and enhance the quality of medical education. The collaboration aims to comprehensively improve healthcare service levels in both regions, and further promote the transformation and application of medical research and technological achievements.

During their visit to PolyU, the delegation from SMU engaged in in-depth discussion on joint medical research, education and talent cultivation, exploring opportunities for deeper collaboration.

Prof. Dong Cheng, Associate Vice President (Mainland Research Advancement) of PolyU presented the latest developments and plans of PolyU in innovative research and interdisciplinary education. Prof. Liu Shuwen, Vice President of SMU, provided a comprehensive overview of SMU's development history, outstanding achievements and future vision.

The SMU delegation visited the University Research Facility in Behavioral and Systems Neuroscience and the University Research Facility in 3D Printing, to gain insights into PolyU's leading research facilities and experimental technologies.
