

Malaysia launches ACTIVE 2.0 Project to improve cervical cancer treatment

18 July 2025 | News

To establish a network of four Centres of Excellence (CoE) for cervical cancer treatment

A regional effort to improve cervical cancer care for patients has launched in Malaysia. Involving 6 countries in Southeast Asia, Project ACTIVE 2.0 aims to enhance cervical cancer treatment and support patient recovery across Southeast Asia.

The three-year initiative will focus on strengthening healthcare systems through clinical training, infrastructure upgrades, and digital innovations, with the goal of expanding access to high-quality, targeted cervical cancer care for patients and their families.

Cervical cancer remains a significant health challenge in Southeast Asia, with over 69,000 new cases and 38,000 deaths reported in 2022, according to the World Health Organization (WHO). While modern radiation treatment has significantly improved outcomes, gaps in access to advanced treatment and trained experts persist. ACTIVE 2.0 addresses these gaps through expanded medical training, upgraded infrastructure, and patient-centered innovations in cancer care.

ACTIVE 2.0 will collaborate with the top oncology treatment centers in peninsula Malaysia as well as east Malaysia, to establish a network of four Centres of Excellence (CoE) for cervical cancer treatment. These centres will receive from the project advanced radiotherapy training equipment as well as infrastructure to support the long-term recovery of their patients.
