

Sectra begins implementation of first digital pathology project in Japan

08 January 2026 | News

This milestone marks Sectra's entry into the Japanese digital pathology market

Sweden-based medical technology and cybersecurity company Sectra, in collaboration with distribution partner Matsunami Glass, has commenced the implementation phase of its first digital pathology project in Japan. This milestone marks Sectra's entry into the Japanese digital pathology market and highlights the potential of its technology to advance diagnostic capabilities and support the country's evolving healthcare needs.

The implementation of Sectra's digital pathology module at Kameda Medical Center follows a contract signed in the second quarter of Sectra's 2025/2026 fiscal year. The contract was sold by Sectra's distribution partner of digital pathology in Japan, Matsunami Glass.

Sectra's digital pathology solution will allow the pathologists at Kameda Medical Center to enhance review and collaboration around cases as well as benefit from tightly integrated AI tools. The digital workflow provides instant and, when needed, remote access to digital images of tissue samples instead of relying on physical glass slides reviewed in microscopes.
