

India's Blockchain for Impact inks MoU with Korea's Unicorn Incubator to support healthcare innovation

April 24, 2026 | News

To enable cross-border market access and innovation initiatives

At the India-Korea Business Forum, held recently in New Delhi, Blockchain for Impact (BFI) signed a Memorandum of Understanding (MoU) with Unicorn Incubator, a member of the Federation of Korean Industries, that acts as a startup business accelerator facilitating collaboration between India and South Korea.

The collaboration establishes a framework for cooperation aimed at advancing healthcare innovation while strengthening connections between the healthcare innovation ecosystems of India and South Korea.

Through this partnership, both organisations will promote knowledge exchange, share best practices, facilitate technology transfer, support healthcare startups through joint research initiatives, mentorship, and infrastructure support, and enable cross-border market access and innovation initiatives between the two countries.

Founded in 2018, Unicorn Incubator is the only startup accelerator in South Korea specialising in the Indian market, facilitating the entry of Korean startups into India and Indian startups into Korea.
