

Korea's AIRS Medical secures investment to accelerate global growth in AI-powered MRI solutions

June 17, 2026 | News

To fuel AIRS Medical's next phase of global expansion

South Korea-based startup AIRS Medical has announced a strategic growth investment from TA Associates, a leading global private equity firm. The investment will help fuel AIRS Medical's next phase of global expansion, advancement of its AI-powered radiology technology solutions and ongoing product innovation.

Founded in 2018, AIRS Medical develops AI-native magnetic resonance imaging (MRI) acceleration and reconstruction software designed to support MRI speed, image quality and workflow performance. Healthcare organisations and leading academic institutions are adopting AIRS Medical's technologies to expand imaging capacity and improve patient access.

Today, the company supports more than 1,700 healthcare institutions across over 40 countries, with its AI technologies utilised in more than 6 million MRI examinations annually.

As healthcare providers increasingly look to improve imaging efficiency by optimising existing infrastructure, AIRS Medical is uniquely positioned at the intersection of AI, medical imaging and healthcare operations to support their efforts. The company's AI-powered MRI acceleration and image enhancement solution (SwiftMR®), and an MRI quantification and structured reporting platform (SwiftSight®), offer healthcare organisations a unified solution from image acquisition through clinical interpretation.
