

Hong Kong and Indonesia deepen partnership to nurture top-tier scientific talent

July 17, 2026 | News

To cultivate future leaders equipped with a global outlook

The Hong Kong University of Science and Technology (HKUST) and the Ministry of Higher Education, Science, and Technology of the Republic of Indonesia have signed a new Memorandum of Understanding (MoU) to reinforce the implementation of an Indonesian government-funded scholarship framework aimed at cultivating top-tier future talent.

A cornerstone of this collaboration is the integration of Indonesia's newly launched Garuda Scholarship to support more outstanding students pursuing undergraduate studies at HKUST. Building on the cooperation agreement established in May 2024, the new MoU solidifies the formal scholarship framework while paving the way for both parties to explore further synergistic opportunities in student internships, academic exchanges, and joint research initiatives to drive innovation in higher education.

Currently, most sponsored Indonesian students are enrolled in programmes spanning Engineering, Business and Management, Science, and Biotechnology. Moving forward, both sides plan to explore opportunities to expand their cooperation in frontier research collaboration and high-impact educational and talent-development initiatives, injecting fresh momentum into the socio-economic development of both Hong Kong and Indonesia.
