

Orbiva inks MoU with Articura to advance digital health ecosystem in Indonesia

July 27, 2026 | News

Combining AI innovation with local healthcare resources to accelerate Indonesia's digital healthcare transformation

Hong Kong-based Home Control International has announced that its wholly-owned subsidiary, Orbiva has entered into a strategic cooperation memorandum (the MoU) with PT Articura Tech Indonesia, an Indonesian health technology company.

Pursuant to the MoU, Orbiva will contribute the Group's expertise in artificial intelligence (AI), AIoT smart devices, healthcare data processing and edge computing technologies. Articura, meanwhile, will leverage its extensive experience in healthcare technology deployment, integration with healthcare institutions' information systems, and hospital networks across Indonesia. Together, the parties aim to develop intelligent healthcare solutions tailored to local needs.

In addition, Orbiva and Articura intend to explore broader opportunities in government collaboration, regional market expansion, and the development of localized large language models for healthcare AI.

Articura has also signed separate Memoranda of Understanding with four leading Indonesian institutions, further expanding its local collaboration network across healthcare, scientific research, academic and higher education, and primary care. The partners are: the National Brain Center Hospital (RSPON), the Faculty of Pharmacy, Universitas Padjadjaran (FF Unpad), medical technology company PT Axis Perifer Sentral, and primary healthcare provider PT Pragati Klinik Medika (Fokus Medika).

As the next major step in advancing Indonesia's localised healthcare AI ecosystem, Articura plans to establish the National AI Healthcare Lab, a collaborative platform integrating living demonstration, application validation, innovation, and education environment.
