Malaysia issues guidance for medical devices

August 20, 2013 | Regulatory | By BioSpectrum Bureau

Singapore: Malaysia's Medical Device Authority (MMDA) has issued guidance on good distribution practices for medical devices.

The guidance specify the scope of activities performed by the establishment and the devices it deals with, its outsourced activities, its special storage and handling conditions and other applicable sections of the Medical Device Act 2012 along with the accompanying legislation.

The document, which addresses certain quality, safety and performance provisions in the country's year-old device regulation, applies to authorized representatives of foreign devicemakers, importers and distributors.
