Telstar adds yet another product to its portfolio

Singapore: Telstar, a leading service provider, recently announced that its subsidiary will manufacture loading and unloading systems for its clients located in the Asia-Pacific region.

Telstar, part of the azbil Group, develops global high-tech solutions in design, engineering, construction and manufacturing processes with automation technologies for the international life sciences markets.

The company's production plant in China handles projects for freeze-drying technologies to cater to the high potential of the pharma market in Asia-Pacific region and to provide local high quality support to customers.

The Telstar brand is now represented in Asia-Pacific region by three specialized production plants and engineering centers in China, Bangladesh and India.

Telstar's plant in Shanghai is highly specialized in the design and manufacture of processing equipment. The factory provides support for the development of equipment and integrated process solutions for the international life sciences market and particularly for the Asia-Pacific region's pharmaceutical sector.

The company has been extensively expanding and increasing its product portfolio since 2009. Telstar has gradually incorporated the manufacture of new types of equipment and the development of services for laboratory and pharmaceutical applications to cater to the growing demands of lifesciences and pharma markets.
