Nitritex re-launches BioClean

Singapore: BioClean, the flagship brand of UK-based Nitritex, is now widely available to Asia Pacific customers with its new manufacturing hub in Kuala Lumpur. BioClean has been leading the way in the cleanroom consumables segment since 1996. Products marketed under the BioClean brand (gloves, goggles, headgear, garments and accessories) are designed for critical environments where product protection is paramount and GMP compatibility is key.

Now, it is re-launching its brand featuring BioClean's Magnificent 7, a band of characters based around the product range. Customers can easily navigate the new BioClean website and access factory tours, educational videos, articles, and meet the new product characters designed to make consumables selection more interactive.

It has ISO Class 4 (Class 10) GMP compatible garments, gloves, and accessories all validated for sterility and Cleanroom processed.
