Agilent Technologies unleashes its Intuvo 9000 a user friendly GC system

Agilent Technologies has added one more sword of state in its arsenal. Recently, the company has divulged its new Gas Chromatography (GC) system called 'Intuvo 9000' GC solution, offering users new innovative technology that will help laboratories meet operational, scientific and financial goals.

The company had conducted a global customer survey before carving its new GC. The feedback it received during the survey was analyzed to make sure that its newly designed machine overcome the challenges faced by its customer in its earlier version. Former edition of GC system had a major complaint that it is very complex and highly skilled operators are required to carry out its operations.

In 'Intuvo 9000', company has eliminated the aforementioned issue hence, making it an uncomplicated field to play on. However, company claims that with Intuvo Flow Technology Smart ID Keys, the Intuvo 9000 system self-identifies installed components and self-configures methods. Operations such as mid-column backflush are made routine by eliminating complex setup and extra calculations.

Elaborating further on the GC, Eric Phillips, GC/MS Marketing Manager, Agilent Technologies, Wilmington, USA said, "We travelled to our global offices with questions and then again revisited them with more question, the entire exercise was conducted with a view of designing a device which is not only user friendly but also abolishes all other road blocks of the process."

"We began this innovative journey by listening carefully to our customers around the world," stated Juan Aybar, Agilent Business Manager, Chromatography and Mass Spectrometry Business in EMEA. "The Agilent Intuvo 9000 GC system provides unprecedented ease-of-use for the GC analyst, at the time lab managers/ owners will experience an impressive boost in productivity and financial outcomes that are now taken to level never seen before in the GC market."

Bharat Bhardwaj, Country Manager, Agilent Technologies opined, " Agilent has been the market leader in GC for the past 50 years. With this heritage, coupled with an extensive network of industry partnerships and market experts, the brand was uniquely positioned to take another leap forward by putting this transformational technology in the hands of our customers."
