EHS signs agreement with GCI

August 10, 2017 | News

The Program aims to facilitate efficient and improved patient care by providing real-time and up-to-date electronic medical information throughout the public health system.

GCI, a Malaysian solution provider with niche focus in Health IT, has signed an agreement to implement its solutions across all public healthcare facilities in Jordan.

The 6-year country wide implementation will see GCI's solutions implemented across more than 540 facilities. This will be part of the country's ongoing Hakeem National e-health Program implementation initiative.

Hakeem, under the patronage of His Majesty King Abdullah II, is Jordan's National E-Health Initiative. The Program aims to facilitate efficient and improved patient care by providing real-time and up-to-date electronic medical information throughout the public health system.

As part of the Hakeem Project, GCI will be providing core modular solutions focusing on Patient Management, Billing, Patient Accounting and Supply Chain Management.

This will be GCI's third key foray in the region having done similar countrywide work in State of Qatar and Emirate of Dubai over the last 5 years. GCI also has regional presence in Saudi Arabia, Lebanon, Abu Dhabi, Iraq and Kuwait.
