eHealth Ventures invests in disruptive diagnostic device

December 12, 2018 | News

eHealth Ventures has invested $900,000 in the company's seed financing round.

eHealth Ventures, the leading Digital Health technological incubator in Israel, has announced the acceptance of its 8th portfolio company - Engineering for All (EfA), managed by Yoel Ezra, an elite IDF technology unit veteran with many years of R&D management experience. eHealth Ventures has invested $900,000 in the company's seed financing round.

EfA is developing RevDx - a revolutionary Digital Diagnostic programable lab-on-hand system that can enable fully automated, on-the-spot gold standard microscopy diagnostics and real-time disease mapping, through an affordable handheld real-time digital, multichannel solution.

This includes full CBC and parasitology capabilities, diagnosis of infectious diseases and precise and affordable test-treat-track treatment - all packaged in a portable, self-powered device. The company is working on a functional prototype and has won several awards in Israel and presented with delegations in India and Taiwan.
