

MyEG Services creates AI based profiling system for COVID-19

February 26, 2020 | News

The system is capable of historical geolocation

Malaysia based IT service management company MyEG Services has developed a profiling system for the coronavirus (COVID-19) based on artificial intelligence (AI).

The fully-automated system comprises of numerous available data points, including visitors' previous known locations, heart rate and blood pressure readings. The data is cross-referenced with public transport ridership and any exposure to locations with infections incidences.

The system is capable of historical geolocation and anomaly tracking for travellers from China

The system has been developed in partnership with Phoenix Travel, a leading China outbound travel company
