

PharmAbcine focuses on Ab therapeutics pipeline in oncology

July 3, 2020 | News

Signs long-term contract manufacturing organization agreement for Olinvacimab with Binex

South Korea based PharmAbcine, a biotech company focusing on the development of antibody therapeutics, announced that it has signed a contract manufacturing organization (CMO) agreement with biologics contract development and manufacturing organization (CDMO) Binex for additional production of investigational Olinvacimab (TTAC-0001), PharmAbcine's leading antibody (Ab) therapeutics pipeline in oncology.

Under the agreement, Binex is responsible for large-scale manufacturing of clinical investigational material for PharmAbcine for its global Phase 2 trials on olinvacimab + immunotherapy combination for metastatic triple negative breast cancer (the U.S. included) and trials on various common solid tumors. Binex has been a clinical manufacturing partner of PharmAbcine since early global clinical trials on olinvacimab.

Olinvacimab, an anti-vascular endothelial growth factor receptor 2 (VEGFR2), targets and inhibits tumor angiogenesis-inducing VEGFR2. PharmAbcine is conducting a Phase 2 clinical trial on olinvacimab in patients with Avastin-refractory rGBM in the U.S. and Australia. In addition, Phase 1b trials on olinvacimab plus PD-1 antibody Keytruda (pembrolizumab) combination for rGBM and mTNBC are still going on in Australia in collaboration with MSD (Merck).
