

- A seamless open-source integration with the ability to program in SAS, R or Python.
- Inclusion of study metadata and data standards enhancements for easier and more complete definition of study details.

- Automation of the development process for tables, listings and figures to ease tracking effort for clinical study report development.
- Addition of two-factor authentication for increased data security.

Ferring, a Swiss biopharmaceutical group, selected SAS as a long-term strategic analytics partner to support its mission. SAS helps Ferring deliver personalized health care solutions and optimize health outcomes by integrating pharmaceutical products with diagnostics, data, devices, education and support services.

“The SAS Life Science Analytics Framework, hosted and managed by SAS in a fully regulatory-compliant cloud environment, helps international virtual teams at Ferring and clinical research organizations (CROs) to access clinical data in the same way and continuously optimize working procedures,” said Bjarke Klein, Vice President of Global Biometrics at Ferring Pharmaceuticals. “This foundational solution enables execution of modern trial designs and has the potential to support decentralized clinical trials,” Klein added.

Going beyond clinical trial data

Health care researchers and regulatory agencies like the US Food and Drug Administration (FDA) need a more comprehensive view of patients to make confident decisions about health care, drug approvals and policy. But clinical trial data, electronic health records, claims data and adverse event reports are only snapshots of patients at random points in time. To provide real value, a holistic patient profile built with real-world data – or observational data collected beyond controlled clinical trials – is needed to achieve the greatest effect on health and wellness and to assess the safety and efficacy of new drugs and medical devices. SAS [Health: Cohort Builder](#) enables quick discovery and creation of patient cohorts for population health analytics, clinical feasibility analysis, safety and efficacy, and more.
