US-based Wound Care partners with NZ firm ARANZ Medical for wound management

April 16, 2024 | News

To significantly enhance the ability of the Wound Care Plus team to document their patients' wound assessment accurately

Wound Care Plus, LLC, a leading provider of mobile wound care services in the US, has announced a groundbreaking partnership with New Zealand (NZ)-based ARANZ Medical to integrate ARANZ Medical's innovative Silhouette wound assessment solution into their wound care management practice. This strategic collaboration will significantly enhance the ability of the Wound Care Plus team to document their patients' wound assessment, procedures, and healing outcomes efficiently and accurately.

The Silhouette solution functions offline, making it perfect for mobile clinicians and allowing wound care practitioners to capture high-quality images and accurate wound measurements without requiring an internet connection. This capability streamlines the onsite wound assessment process, empowering the Advanced Wound Specialists at Wound Care Plus to conduct thorough assessments with unparalleled precision, regardless of the patient's location.

The wound specialists at Wound Care Plus have collaborated with the New Zealand-based software team at Silhouette to ensure ease of documentation, compliance with regulatory requirements, and other features desirable to mobile practitioners. This collaborative effort has ensured that the Silhouette system is tailored to meet the specific requirements of the Wound Care Plus team. The Silhouette system rollout and training will continue throughout the coming weeks in all the states and care settings where Wound Care Plus treats patients with wounds or skin issues. The integration of Silhouette into the mobile workforce at Wound Care Plus represents a paradigm shift in the way wounds are assessed, monitored, and treated.
