Indian startup CareMother by Doto Health expands to Vietnam

June 7, 2025 | News

To address persistent challenges in reducing maternal and infant mortality

Indian digital healthcare startup CareMother has taken a major step in advancing maternal and child healthcare in Southeast Asia. Through a strategic partnership with FHI 360, Alive & Thrive, and the Health Departments of Quang Tri (Vietnam), Savannakhet, and Salavan (Laos), CareMother by Doto Health is now officially supporting local health systems with its digital health solutions. The startup is onboarding various partners to ensure the availability of CareMother products and scaling operations.

During the 2025 Annual Conference and Knowledge Exchange in Quang Tri, the startup signed a Memorandum of Understanding (MoU) to drive impactful change using its artificial intelligence (AI)-powered medtech solutions and conception of a newborn monitoring platform.

This cross-border collaboration is designed to harness innovative digital health solutions to address persistent challenges in reducing maternal and infant mortality.

CareMother demonstrated its Wireless Fetal Monitor at Dakrong District Hospital, showcasing how expectant mothers can move freely during testing while doctors monitor live results remotely.

By integrating CareMother's AI-powered platform, the initiative will enable real-time diagnostics, remote monitoring, and data-driven decision-making, empowering frontline health workers and enhancing healthcare delivery in underserved areas. This breakthrough was well received by stakeholders, who appreciated its potential to improve access and quality of maternal care.
