Nirrin Technologies and S.T. Japan announce exclusive distribution partnership for TALOSâ?¢

June 15, 2026 | News

Partnership expands access to next-generation protein quantitation technology across Japan

Nirrin Technologies, a developer of analytical tools designed to transform bioprocessing workflows, has announced the appointment of S.T. Japan as its exclusive distribution partner for the TALOS™ protein quantitation system in Japan.

S.T. Japan, a specialised provider of spectroscopic analysis technologies, analytical systems, and scientific instrumentation, will serve as the exclusive commercial representative for TALOS™ throughout Japan, providing local sales, technical support, and application expertise to customers in the biopharmaceutical, life sciences, and academic sectors.

As part of the agreement, S.T. Japan will purchase a TALOS™ demonstration system, establishing local evaluation capabilities that will allow prospective customers throughout Japan to assess the technology using their own samples and workflows.

TALOS is a protein quantitation system designed to replace traditional variable pathlength UV workflows with a simpler fixed-path near-infrared measurement approach. By directly measuring absorption from the peptide backbone, TALOS enables rapid protein quantitation across a wide concentration range without dilution, protein-specific calibration models, extinction coefficient determination, or manual pathlength adjustment.
